Go Tournament – Quick start

Run a Go tournament with tournament ratings (TGoR) – everything in your web browser.

1. Install and start

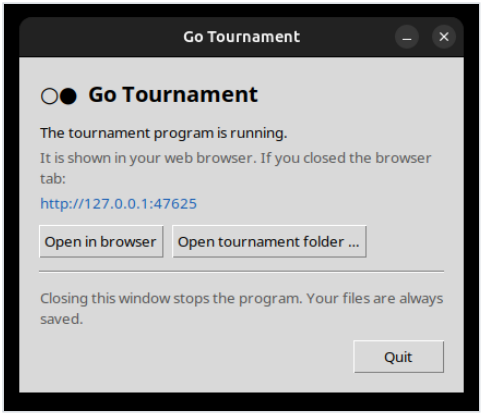

Download the archive for your computer and unpack it (double-click). No other installation is needed.

System	Start the program
Windows	Open the folder `GoTournament` and double-click `GoTournament.exe`. On the first start Windows may show *"Windows protected your PC"*: click **More info**, then **Run anyway**. Tip: right-click `GoTournament.exe` → *Send to* → *Desktop (create shortcut)*.
macOS	Drag `Go Tournament.app` into *Applications*. On the first start, **right-click** the app → **Open** → **Open**. (If macOS refuses: *System Settings* → *Privacy & Security*, scroll down, **Open Anyway**.) Needs a Mac with Apple processor (M1 or newer).
Linux	Unpack the archive and start `GoTournament/GoTournament`.

The warnings appear because the program is free and not registered ("signed") with Microsoft or Apple. They appear only on the first start.

When it starts, the program opens a **small window** and shows the tournament program in your **web browser**. The program runs only on your computer; nothing is sent to the internet except the look-up of players in the EGD.

- Open in browser – if you closed the browser tab.
- Open tournament folder … – open a tournament stored somewhere else (e.g. on a USB stick).
- Closing the window ends the program. Everything is already saved.

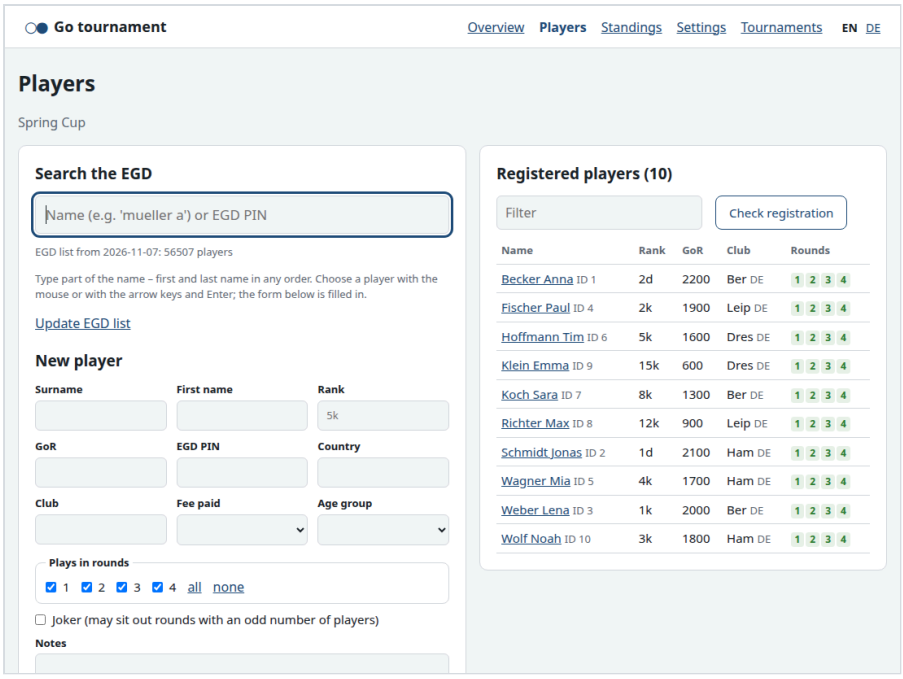

The program window

Also useful: LibreOffice (free, *libreoffice.org*) to open the tournament files (`.ods`) – optional, everything can be done in the browser. An **internet connection** during registration, for the EGD search. A **printer** for the pairings.

2. Before the tournament

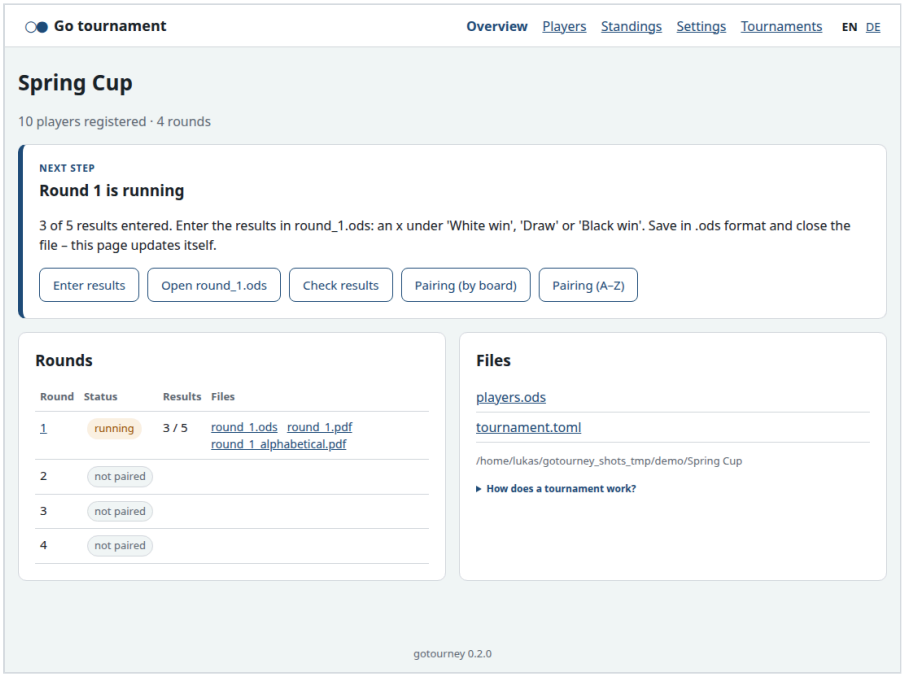

1. **Create the tournament:** on the start page enter the name and the number of rounds and click Create tournament. Your tournaments are stored in the folder `Documents/Go tournaments`, one folder per tournament, and appear on the start page.
2. **Settings** (top menu): check place, dates, rounds, handicap, prizes and the additional player data (e.g. *Fee paid*, *Age group*). Each field has an explanation. Click Save settings.
3. **Players**: type part of a name into *Search the EGD* (e.g. `becker a`) and choose the player – the form is filled in. Check rank, rounds and fee, then Add player. Players who are not in the EGD: fill in the form by hand (at least name and rank).

Players: EGD search on the left, registered players on the right

3. On the tournament day

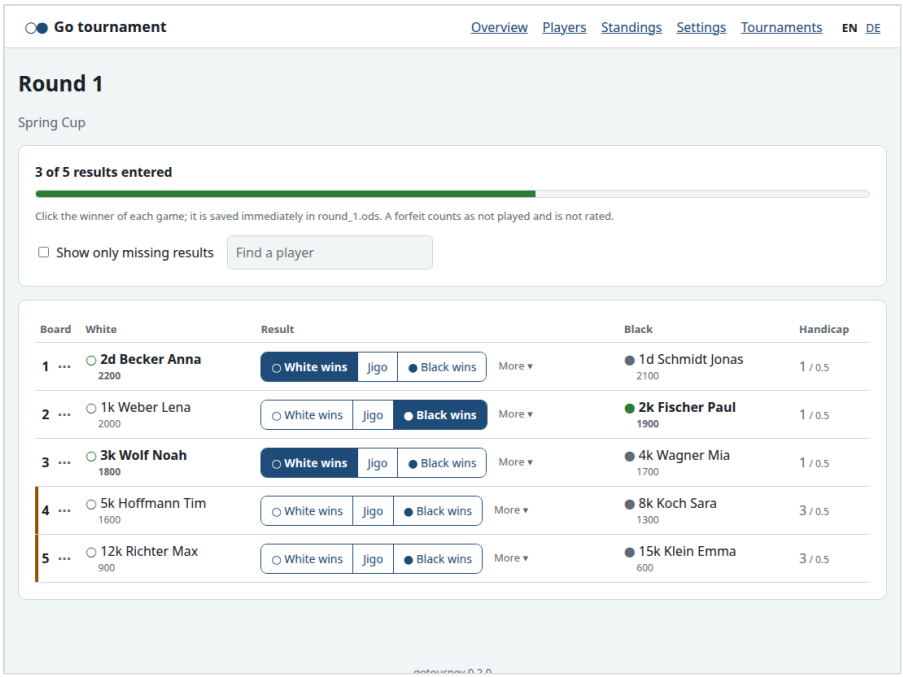

The **Overview** always shows the **next step** with the right buttons. Just follow it:

Overview: the blue box shows the next step

1. **Close registration:** Check registration shows missing or doubtful data. Then Pair round 1.
2. **Print the pairing:** Pairing (by board) and Pairing (A–Z) open printable PDFs (with colours, handicap and komi). Put them up.
3. **Start the round** when the games begin: Start round 1. From now on the boards are fixed. Late players can still be added and paired among each other (Pair latecomers).
4. **Enter results:** Enter results, then click the winner on each board. It is saved immediately. Forfeits and other cases are under *More*.

5. When all results are in: look at the **Standings**, then Pair round 2 – and so on.

Entering results: one click on the winner

4. After the last round

1. **Standings** (top menu): **Award ceremony** – slides with all prize winners (PDF, show it full-screen). Which prizes exist is set in the settings.
2. **Wall list** → Create: the final places. You may correct the spelling of names in `wall_list.ods`.
3. **EGD result file** (`.h9`): send it to your national rating officer.

5. Good to know

- **Everything is a file.** All data is in the tournament folder: `players.ods`, `round_1.ods`, …, `tournament.toml` (settings). You can open the `.ods` files in LibreOffice at any time and change them there – the browser page updates itself.
- **Only one at a time:** while a file is open in LibreOffice (🔒 in the browser), the program cannot change it. Save it (keep the *.ods* format) and close it, then continue in the browser.
- **Backups:** before every pairing and round start, all files are saved in the folder `backups`. To go back, unpack a backup into the tournament folder.
- **Pairing again:** a round that has not been started can be paired again (e.g. after a late cancellation). Single boards can be changed by hand with the ⋯ menu next to the board number.
- **Language:** the browser pages switch with **EN / DE** at the top right; the language of the printouts is a setting.
- **How it works:** the TGoR, handicap, pairing rules, prizes and the files are explained in detail in **Guide.pdf** (German: Anleitung.pdf).

> **Problems?** If the browser page shows an error, read the message – it says what to do. If the program does not start, start it again; if it is already running, the browser simply opens it. The log file `gotourney.log` is in the program's settings folder (Windows: `%APPDATA%\gotourney`, macOS: `~/Library/Application Support/gotourney`, Linux: `~/.config/gotourney`).
